Inspired by traditional Indian stone screens, Jali® Panels reflect and refract light, creating a complex interplay of light, shadow, movement and color. This award winning material is highly specifiable and available in seven different patterns named for the internal geometry of the texture - these patterns are Mille (with “thousands of internal reflectors”), Triangolo (with a “Triangular” internal texture), Quadrato (with a pattern of “squares” within), Cascata (with a “cascading” water like texture), Cambia (a “varying” pattern), Flight (with “wing-like” reflectors) and Mezzaluna (with “half-moon” shapes within).
