

Panelite Panels optimize daylight to save energy. Starlight translucent honeycomb panels allow natural light into the floating meeting rooms, saving on energy requirements for artificial lighting.

Prague University
Prague, Czech Republic

Bencore features 4 varieties within its product family-- Starlight (on display in clear), Lightben, Kaos, Hexaben (on display in blue and clear), and Ecoben.

Creating a more industrial look, HEXABEN uses an aluminum honeycomb for the core structure. When looking straight onto the sheet, you can see through the panel, but moving sideways has the effect of cutting off the ability to see through the panel. Ideal for privacy concerns.
