

# SHIFT

SHIFT changes from BLACK through the color spectrum at temperatures between 75 and 84 °F

SHIFT makes use of BLACK 2.0 as a base coat and Stuart Semple's RAINBOW LIQUID, which is a very special coating that uses the best quality Chiral liquid crystals in a unique varnish that is perfectly compatible with BLACK 2.0, and designed to shift color on almost any surface.

# PHAZE

PHAZE is a color changing acrylic paint set by Stuart Semple.

This coating enables almost any object to be coated in a durable, ultra matte finish that changes from HAZE (Stuart Semple's purple) to PINK (the world's pinkest pink). Whatever you paint with PHAZE will fade between the two colors at temperatures above 82 °F
