

THIS BECOMES THAT

SUSTAINABLE MATERIALS MADE FROM RECYCLED CONTENT

The Materials Library is proud to highlight a selection of sustainable materials that are predominantly manufactured from recycled content. With the increasing awareness and urgency of climate change, sustainable materials and processes are now more necessary than ever. Each material sample is displayed with things that are recycled in order to create the new material.

THE MATERIALS LIBRARY has been in development since 1999 and was funded by three major grants from the George Frederick Jewett Foundation. Contact Joseph Angelo at joseph.angelo@cca.edu for an appointment outside regular hours or to schedule a class visit.
